

# Company Profile

## Magnets realize ideas

The company Peter Welter was founded in 1958 in Cologne. Basis of the company foundation was the invention of the magnetic catch, presented by us as innovation on the fitting market in Germany.

Based on the great success of this new catch technology in furniture fittings, further applications have been developed in relation with the German Industry for the areas car manufacture, white goods, plant and machine construction etc...

In 1973 the closed corporation Peter Welter became Peter Welter GmbH & Co. KG.

For reasons of expansion a move from Cologne to the current location in Erftstadt, 20 km of Cologne, took place in 1982.

Through the development of new magnetic materials in the 1970s (Sm/Co) and 1980s (NdFeB) the magnetic technology attained the today's status of a key component for High-tech uses.

Our today's action field applies to markets and applications e.g. car manufacture, plant and machine construction, chemistry, electrical engineering, Sensor technology ...  
electric motors, electronic systems, displays, cases, wind power plants....

We see our job in

- conceiving and supplying optimized magnets and magnetic systems after given basic conditions
- covering a large part to demanded qualities by a comprehensive standard program of 1.000 magnets and magnetic systems from stock
- allowing a quick check of the suitability of samples or prototypes with the supply of samples or prototypes
- advising you in all interests of the magnetic technology.
